Function

Adjustment possibilities

The sensor features a switching output with 2 programmable switch points and an analog output with 2 programmable limits. Programming the switch points, the limits, the output mode, the output logic and the beam width can be done in two different ways:

- Using the sensor's programming buttons
- Using the IO-link interface of the sensor. This method requires an IO-link master (e.g. IO-link-Master02-USB) and the associated software. The download link is available on the product page for the sensor at www.pepperl-fuchs.

Synchronization

The sensor features a synchronization input for suppressing ultrasonic mutual interference („cross talk").
The following synchronization modes are available:

1. Automatic multiplex mode.
2. Automatic common mode
3. Externally controlled synchronization

Further Documentation

- For information on programming via programming buttons and synchronisation you may refer to the commissioning instruction.
- For detailed information on application and programming via IO-Link we provide a manual.
