

Wireless ultrasonic sensor WS-UCC2500-F406-B15-B41-01-02

- Battery operated
- Data transfer via LoRaWAN
- Bluetooth interface for commissioning, parameterization and diagnostics

Wireless ultrasonic sensor with LoRaWAN interface

Function

The wireless ultrasonic sensor can be used for remote monitoring of fill level. The fill level, but also other parameters such as geo data and sensor status data, are measured or recorded in configurable time intervals and transmitted to a counterpart in the LoRa network from where they are available for pure display or further processing. The sensor is parameterised via a Bluetooth interface using a mobile device (smartphone or tablet) and the WILSEN app belonging to the sensor.
